

INNOVATIVE PET LAB

A science-driven pet wellness company
on a mission to redefine pet care

DIGESTION & DETOX

**Better Digestion Equals Better Absorption of Nutrients
Test - Don't Guess!**

SYMPTOMS:

Weight Loss

Diarrhea or
Constipation

Bad Breath

Gas / Bloating

WHAT WE TEST & WHY:

Beta-glucuronidase

Beta-glucuronidase is an enzyme produced by dogs, (and humans!) and certain gut bacteria that helps break down complex carbohydrates, toxins and hormones. This breakdown can allow for toxins to be reabsorbed, potentially increasing the levels of harmful substances in your pet's body.

Pancreatic Elastase 1

Pancreatic Elastase 1 (PE1) is an enzyme that plays a crucial role in the digestion of proteins. Low levels can indicate impaired digestion and absorption of nutrients.

Our Process

REGISTER

Create an account
and register your kit.

COLLECT

Collect a stool sample.

MAIL

Send your sample to the lab
and get results within
10 - 14 days.

"A Game-Changer in Pet Health: Innovative Pet Lab!"

As a holistic veterinarian with a focus on gut health, I can't recommend Innovative Pet Lab's stool tests enough. Their tests go beyond traditional screenings to offer vital insights."
